REFERENCE

Document Ref. MB-AI / V.01
Classification: Product Handbook
Status: Released for presentation

From a single product page to a complete, purchasable outfit — four movements, one click apart.

- i

SELECT
Choose any clothing item on an e-commerce platform. One tap on “Match My Outfit” begins the process.
- ii

ANALYSE
The engine reads colour, silhouette, material, style and occasion to build a structured item profile.
- iii

MATCH
Compatible clothing and accessories are filtered from connected stores and assembled into one look.
- iv

SHOP
Review the complete look, open each recommended product and purchase directly on the platform.

II

Core Functions

CHAPTER TWO — CAPABILITIES

Six functions carry the user from a single item to a purchased, complete outfit. Each is documented under a reference code for traceability into the prototype.

01	AI OUTFIT MATCHING Recommends clothing and accessories that visually complement the selected product.	REF. FN-01
02	STYLE RECOGNITION Analyses colour, silhouette, material, style and occasion to build a structured item profile.	REF. FN-02
03	COMPLETE LOOK GENERATION Combines multiple products into one coherent, wearable outfit rather than isolated items.	REF. FN-03
04	CROSS-PLATFORM DISCOVERY Finds complementary products across connected e-commerce stores, beyond the original page.	REF. FN-04
05	BUDGET MATCHING Generates outfit combinations within the user's preferred spending range.	REF. FN-05
06	DIRECT SHOPPING Opens recommended products in place; purchasing continues natively on the e-commerce platform.	REF. FN-06

III Core Advantages

CHAPTER THREE — VALUE

Six points of difference against manual search, generic recommendations and wardrobe-based styling applications.

- 01

LESS GUESSWORK

Compatibility is evaluated before purchase, not after delivery. The uncertainty of matching disappears from the decision.
- 02

PERSONALISED RECOMMENDATIONS

Recommendations adapt to the user’s preferred style, sizing and budget over repeated sessions.
- 03

FASTER SHOPPING

The time spent searching for individual matching items falls from hours to seconds.
- 04

FROM INSPIRATION TO PURCHASE

An outfit idea becomes immediately purchasable product — no separate saving, planning or list-making step.
- 05

CROSS-STORE DISCOVERY

Complementary items are found beyond the original product page and across multiple stores.
- 06

COMPLETE OUTFIT IN ONE PLACE

Multiple products are shown working together as one look before any purchase is committed.

“Not a wardrobe management application.”

MATCHBUY AI OPERATES AT THE MOMENT OF SHOPPING — ON THE PRODUCT PAGE — AND ITS OUTPUT IS A PURCHASE, NOT A TO-DO LIST.

IV Application Scenarios

CHAPTER FOUR — USE CASES

Four recurring shopping situations in which MatchBuy AI removes the matching bottleneck.

01 EVERYDAY SHOPPING

SITUATION

A shirt is found and liked, but the trousers and shoes to wear with it remain unknown.

WITH MATCHBUY AI

One tap generates a complete casual outfit with direct product links.

02 OCCASION DRESSING

SITUATION

An outfit is required for a dinner, interview, date or event, and time is short.

WITH MATCHBUY AI

Products are filtered by occasion, formality and dress code.

“Complete my outfit under ¥500.”

03 BUDGET SHOPPING

SITUATION

A complete outfit is required within a defined spending range.

WITH MATCHBUY AI

The best-matching combination that fits the range is returned.

04 MATCH A SPECIFIC ITEM

SITUATION

One item is already decided upon; the rest of the look is missing.

WITH MATCHBUY AI

Complementary products complete the outfit around the chosen piece.

V Example User Journey

CHAPTER FIVE — DOCUMENTED WALKTHROUGH

A complete purchase, documented step by step. The sequence corresponds directly to the screens of the interactive prototype.
